EDUCATION

Vellore Institute of Technology

B.Tech CSE (Information Security), CGPA: 8.92

Vellore, Tamil Nadu

2024 – 2028

Delhi Public School

Class XII (CBSE): 90.4%

Delhi

2024

Delhi Public School

Class X (CBSE): 94.6%

Delhi

2022

TECHNICAL SKILLS

Programming Languages: Java, Python, C/C++, SQL, JavaScript

Web Technologies: HTML, CSS, React.js, Node.js, Express.js

AI/ML & Computer Vision: OpenCV, NumPy, Pandas, Machine Learning

Databases: MySQL, PostgreSQL, MongoDB

Tools: Git, GitHub, FastAPI, MATLAB, WordPress

Core Concepts: DSA, OOP, REST APIs

EXPERIENCE

AIML Intern

Centre for Development of Advanced Computing (C-DAC)

May 2026 – July 2026

Noida, India

- Developed and evaluated face detection and recognition pipelines using computer vision and deep learning techniques.
- Compared multiple face detection models including Haar Cascade, HOG, MMOD, RetinaFace, and SCRFD based on accuracy and inference time.
- Implemented ArcFace embeddings with cosine similarity for facial recognition and identity matching on image datasets.

Business Development Intern

Valsco Technology

May 2025 – July 2025

Remote

- Researched and profiled 150+ prospective clients across legal and academic sectors into a structured, filterable dataset.
- Automated lead tracking and reporting with spreadsheet formulas and query-based filters, cutting manual data entry by 40%.
- Gathered and documented client requirements with mentors, mapping business needs to feasible technical solutions.

POSITIONS OF RESPONSIBILITY

Co-Secretary

IEEE Women in Engineering

Feb 2026 – Feb 2027

- Organized and served as a first-round judge for a flagship 1000+ participant hackathon, screening team submissions on problem framing, technical stack choices, and architectural scalability, and delivering structured feedback to competing teams.
- Coordinated multiple hackathons, technical workshops, and speaker sessions, and restructured chapter record-keeping and event-planning workflows into a shared tracking system that cut coordination overhead.

PROJECTS

PlaceMe AI | *React, FastAPI, LangChain, Groq, Gemini, PostgreSQL, OAuth 2.0* | [Live](#) | [Code](#)

September 2026

- Built a full-stack app turning college placement emails into a searchable company directory — Gmail OAuth 2.0 feeding a LangChain + Groq chain with PydanticOutputParser to extract 14 structured fields per email across 11 REST endpoints.
- Engineered the sync to survive free-tier timeouts: IDs de-duplicated before fetching, batches of 8 committed per email so no work is lost, plus a 2-provider fallback (Groq → Gemini, ~2s/email) with regex heuristics when models fail.
- Shipped to production at \$0/month on Vercel, Render and Supabase with JWT auth, Fernet-encrypted OAuth tokens, rate limiting and 20 CI tests.

AI Celebrity Face Recognition System | *Python, OpenCV, RetinaFace, SCRFD, ArcFace, Vision Transformer* | [Code](#) | [Model](#)

- Developed a celebrity face recognition system using SCRFD for face detection and ArcFace embeddings for identity recognition on a dataset of 153 celebrities.
- Achieved 87.22% recognition accuracy using ArcFace embeddings with cosine similarity matching on 255 test images.

ACHIEVEMENTS

- Solved 250+ Data Structures & Algorithms problems across LeetCode and GeeksforGeeks covering arrays, linked lists, trees, graphs, greedy algorithms, and dynamic programming.
- Captained a team to achieve a Top 10 position in the MIDAS International Hackathon, leading strategy and execution.
